FOREWORD

The Illinois Criminal Justice Information Authority is a state agency created in 1983 to promote community safety by providing public policymakers, criminal justice professionals and others with information, tools and technology needed to make effective decisions that improve the quality of criminal justice in Illinois. The Authority provides an objective system-wide forum for identifying critical problems in criminal justice, developing coordinated and cost-effective strategies, and implementing and evaluating solutions to those problems. The specific powers and duties of the Authority are delineated in the Illinois Criminal Justice Information Act (Illinois Compiled Statutes, Ch. 20, Sec. 393/7). Two of the Authority’s many responsibilities are serving as a clearinghouse of information and research on criminal justice and undertaking research studies to improve the administration of criminal justice.

Since 1989, the Authority’s Research and Analysis Unit has received funds under the federal Anti-Drug Abuse Act of 1988 to document the extent and nature of drug and violent crime in Illinois and the criminal justice system’s response to these offenses. As a result of these efforts, the Authority has amassed a large amount of data measuring the extent and nature of drug and violent crime in Illinois and the impact these crimes have had on the criminal justice system. To put this information into the hands of Illinois’ criminal justice policymakers in a useful summary format, the Authority’s Research and Analysis Unit has developed profiles of the criminal justice system for each county in Illinois. In 1994, the Illinois Criminal Justice Information Authority produced a series of reports detailing criminal justice system activity levels for each of Illinois’ 102 counties. As a result of the positive response by local criminal justice officials, in 1996 the Authority updated and expanded the scope of these reports to reflect current criminal and juvenile justice activity. It is hoped that these 2004 updated reports will be as valuable, if not more, than the original versions. In addition to providing policymakers with an overview of activities across the components of the justice system in their county (law enforcement, courts and corrections), the profiles also provide perspective by including trends experienced in counties with similar population sizes.

While the data presented in this report are by no means inclusive of all indicators, they do provide a general overview of crime and the criminal justice system’s response. In addition, these data are readily available and consistently defined through existing statewide data collection mechanisms.

The information presented in this profile has been provided to the Authority by a number of state agencies, specifically: the Illinois State Police, the Administrative Office of the Illinois Courts, the Illinois Department of Corrections, and the Illinois Department of Children and Family Services. The support and cooperation of these agencies and their staffs have helped make this report an informative and timely source of information on the activities of the criminal justice system in Illinois.

The Illinois Criminal Justice Information Authority's Web-based clearinghouse of criminal justice data available at:

http://www.icjia.state.il.us.
I. Introduction

Rock Island County, located in northwestern Illinois, covers an area of 427 square miles and had a 2003 population of 147,912, according to estimates by the U.S. Department of Commerce's Bureau of the Census. Using these figures, Rock Island County was the 67th largest county in Illinois geographically, but 14th largest in terms of population. Combining these two measures, Rock Island County had the 10th highest population density per square mile among Illinois’ 102 counties.

As with the previous reports, information specific to Rock Island County is presented in comparison with similar counties. To provide more useful comparisons, counties have been separated into four types; 1) Cook County, 2) Collar counties, 3) urban counties (outside of Cook and the Collar counties), and 4) rural counties. Because of its size, Cook County is compared to the rest of the state. The Collar counties are the five that border Cook County (DuPage, Lake, Kane, McHenry, and Will). Urban and rural counties are defined by whether or not they lay within a Metropolitan Statistical Area (MSA) (Appendix 1, page 25). Based on these definitions, there are 36 counties in Illinois that are part of a MSA (Cook, Collar, and urban counties) and 66 counties that are not part of a MSA (in other words, rural).

Recent changes to the standard definitions of MSAs have affected the classification of several Illinois counties. The United States Office of Management and Budget (OMB) defines metropolitan and micropolitan statistical areas according to published standards that are applied to Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on the application of 2000 standards to 2000 decennial census data and were announced by OMB on June 6, 2003.

Standard definitions of metropolitan areas have changed over time. The term "metropolitan area" (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). More recently, the term "core based statistical area" (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas.

The 2000 standards require that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a "central county" (counties). Additional "outlying counties" are included in the CBSA if they meet specified requirements regarding residents commuting to or from the central counties.
Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of: 1) the recognition of new areas as they reached the minimum required city or urbanized area population, and 2) the addition of counties to existing areas due to new decennial census data. In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data.

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For more information, contact the Population Distribution Branch at (301) 763-2419 (U. S. Census Bureau).

Based on these characteristics, Rock Island County is one of Illinois’ 30 urban counties. Throughout this report, the criminal justice activity trends experienced in Rock Island County will be compared to those trends experienced in the other urban counties. This comparison will be realized through the calculation of rates for the activities being analyzed, with the number per 100,000 population the format for all the rates.
II. Law Enforcement Activities in Rock Island County

One of the most commonly used indicators of the level of crime in a particular jurisdiction is the number of *Index offenses* reported to the police. There are eight separate offenses which constitute the Crime Index, including murder, criminal sexual assault, robbery, aggravated assault (violent Index offenses), burglary, theft, motor vehicle theft, and arson (property Index offenses). Although these eight offenses do not account for all crimes reported to the police, they are considered to be the most serious, frequent, pervasive, and consistently defined by different law enforcement agencies.

An indicator of the workload that law enforcement agencies place on other components of the justice system is the number of arrests made by police, including those for violent and property Index offenses and drug offenses. Unlike offenses, which are what police must respond to, arrests represent those offenders who may eventually be processed through other components of the justice system, including the courts, county jails, and state and local correctional programs.

In addition to local law enforcement agencies, the Quad-Cities Metropolitan Enforcement Group (QCMEG) also serves Rock Island County. Throughout most of the period analyzed, there were 21 Metropolitan Enforcement Groups (MEGs) and task forces operating in Illinois. A county is considered to be served by a MEG or task force if at least one law enforcement agency within that county participated in that MEG or task force either by providing personnel or financial resources.

To learn more about the drug enforcement activities of the Quad-Cities Metropolitan Enforcement Group and Illinois’ other MEGs and task forces, profiles of each of the units were developed by the Authority’s Research and Analysis Unit and are available through the Authority’s Criminal Justice Information Clearinghouse or can be downloaded from the Authority’s Website at [www.icjia.state.il.us](http://www.icjia.state.il.us).
Violent Index Offenses Reported to the Police in Rock Island County

The number of violent Index offenses reported to the police in Rock Island County decreased 19 percent between 1994 and 2003, from 991 to 803. As in previous years and in most other counties, aggravated assault offenses accounted for the majority (74 percent) of violent Index offenses reported in Rock Island County in 2003.

Similarly, between 1994 and 2003, the violent Index offense rate in Rock Island County decreased 17 percent, from 658 to 543 offenses per 100,000 population (Figure 1). During that same period, the violent Index offense rate in the other urban counties decreased 33 percent, from 801 to 533 offenses per 100,000 population. The 2003 violent Index offense rate in Rock Island County was 2 percent higher than the rate in the other urban counties.

Figure 1

Total Violent Index Offense Rates in Rock Island and Other Urban Counties

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data
Between 1994 and 2003, the number of property Index offenses reported to the police in Rock Island County decreased 23 percent, from 7,911 to 6,099. Thefts accounted for 79 percent of all property Index offenses reported in Rock Island County during 2003.

Between 1994 and 2003, the property Index offense rate in Rock Island County decreased 21 percent, from 5,251 to 4,123 offenses per 100,000 population (Figure 2). In the other urban counties, the property Index offense rate decreased 18 percent, from 4,440 to 3,649 offenses per 100,000 population. The 2003 property Index offense rate in Rock Island County was 13 percent higher than the rate in the other urban counties.

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data
Between 1994 and 2003, arrests for total Index offenses by law enforcement agencies in Rock Island County decreased 6 percent, from 1,988 to 1,865. The majority of Index arrests were for property Index offenses. Of the 1,865 Index arrests made in Rock Island County during 2003, 25 percent were for violent Index crimes and 75 percent were for property Index crimes. Arrests for theft and aggravated assault accounted for the majority of property and violent Index arrests in Rock Island County during 2003. Of all violent Index arrests, 86 percent were arrests for aggravated assault, while thefts accounted for 82 percent of all property Index arrests.

Between 1994 and 2003, the Index arrest rate in Rock Island County decreased 4 percent, from 1,320 to 1,261 arrests per 100,000 population (Figure 3). During the same period, the Index arrest rate in the other urban counties decreased 17 percent, from 1,106 to 923 arrests per 100,000 population. In 2003, Rock Island County’s Index arrest rate was 37 percent higher than the Index arrest rate in the other urban counties.

**Figure 3**

*Index Arrest Rates in Rock Island and Other Urban Counties*

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data
Drug Offense Arrests in Rock Island County

Between 1994 and 2003, arrests for total drug offenses (including violations of Illinois' Cannabis Control Act, Controlled Substances Act, Drug Paraphernalia Control Act, and the Hypodermic Syringes and Needles Act) increased 68 percent, from 752 to 1,265 (Figure 4). After a significant increase from 1994 to 1995, total drug arrests in Rock Island County remained relatively stable from 1995 to 2001, before spiking in 2002. Violations of the Cannabis Control Act (which prohibits the possession, sale, and cultivation of cannabis) accounted for the majority of the increase in total drug arrests between 1994 and 2003. By contrast, for most other counties in Illinois, arrests for violations of the Drug Paraphernalia Control Act account for the majority of the increase in drug arrests. In Rock Island County, the number of arrests for violations of the Cannabis Control Act increased 97 percent, from 375 arrests in 1994 to 738 in 2003 (Figure 4). Arrests for violations of the Cannabis Control Act comprised 58 percent of all drugs arrests in 2003.

Furthermore, between 1994 and 2003, arrests for violations of Illinois' Cannabis Control Act in Rock Island County have consistently out-numbered arrests for violations of the Controlled Substances Act (which prohibits the possession, sale, distribution, or manufacture of all other illegal drugs such as cocaine and opiates). Between 1994 and 2003, the number of arrests for violations of the Controlled Substances Act in Rock Island County increased 22 percent, from 243 to 297 (Figure 4).

Figure 4

Drug Arrests in Rock Island County

![Drug Arrests in Rock Island County](image)

Source: Illinois State Police
Between 1994 and 2003, the arrest rate for all drug law violations in Rock Island County increased 71 percent, from 499 to 855 per 100,000 population (Figure 5). Similarly, the total drug arrest rate in the other urban counties more than doubled between 1994 and 2003, from 318 to 642 per 100,000 population. In 2003, the drug arrest rate in Rock Island County was 33 percent higher than the rate in the other urban counties.

**Figure 5**

**Drug Arrest Rates in Rock Island and Other Urban Counties**

Drugs Seized in Rock Island County

Drugs seized by law enforcement agencies are another indicator of the extent and nature of the illegal drug trade in a jurisdiction. When illegal drugs are seized by law enforcement agencies in Illinois, they are submitted to a crime lab for analysis. Most agencies submit drugs to one of the Illinois State Police crime labs. These labs record the quantity of drugs submitted from each county. This section discusses the quantities of illegal drugs seized and submitted to the Illinois State Police from law enforcement agencies in Rock Island County.
Cannabis Seized in Rock Island County

Cannabis accounts for the majority of drugs seized in Rock Island County and in most Illinois jurisdictions. Between 1994 and 2003, the quantity of cannabis seized in Rock Island County decreased 93 percent, from 197,749 grams to 14,048. During the period between 1994 and 2003, the quantity of cannabis seized in the other urban counties decreased 55 percent, from 1,114,018 grams to 500,586 grams (Figure 6).

Between 1994 and 2003, the cannabis seizure rate in Rock Island County also decreased 93 percent, from 131,267 grams per 100,000 population in 1994 to 9,498 grams in 2003. The cannabis seizure rate in the other urban counties decreased 57 percent from 46,176 grams per 100,000 population in 1994 to 19,839 grams in 2003. In 2003, the cannabis seizure rate in the other urban counties was more than double the rate in Rock Island County.

Source: Illinois State Police

A Profile of the Rock Island County Criminal and Juvenile Justice Systems
Cocaine and Crack Cocaine Seized in Rock Island County

The quantity of powder cocaine seized in Rock Island County increased between 1994 and 2003, while the quantity of crack cocaine seized decreased. The quantity of powder cocaine seized increased more than four-fold, from 879 grams in 1994 to 4,800 grams in 2003 (Figure 7). During the period analyzed, with the exception of 1994, crack cocaine seizures accounted for a relatively small portion of all cocaine seized in Rock Island County. Between 1994 and 2003, the quantity of crack cocaine seized decreased 95 percent, from 3,469 grams to 179 grams. However, in 1994, crack cocaine seizures accounted for 80 percent of all cocaine seized in Rock Island County.

![Figure 7](source: Illinois State Police)

The quantity of powder cocaine and crack cocaine seized in the other urban counties decreased during the period analyzed. Between 1994 and 2003, the amount of powder cocaine decreased 33 percent, from 47,535 grams to 31,774 grams in the other urban counties, while the quantity of crack cocaine seized decreased from 7,970 grams to 6,111 grams. In 2003, 3,245 grams of powder cocaine per 100,000 population seized in Rock Island County, more than double the rate of 1,259 grams of powder cocaine per 100,000 population seized in the other urban counties.
III. Adult and Juvenile Court Activity in Rock Island County

Although Illinois has one of the best court reporting systems in the country, the Administrative Office of the Illinois Courts only collects information regarding the aggregate number of court filings, dispositions, and probation caseloads. Currently, there are no statewide data available on court filings, dispositions, and convictions by offense type. However, detailed offense data are available from the Illinois Department of Corrections for those convicted felons sentenced to prison.

Trends in the number of delinquency petitions filed and adjudicated in juvenile court are also presented. Illinois statutes define delinquency offenses as those committed by someone younger than 17 years old that would be considered crimes if committed by someone 17 years of age or older.

In Illinois, county probation departments are overseen by the Administrative Office of the Illinois Courts’ Probation Division. This section also presents data on active misdemeanor and felony adult caseloads and the number of juveniles under the supervision of the probation departments in Rock Island County and the other urban counties.

*Misdemeanor and Felony Filings in Rock Island County*

The Administrative Office of the Illinois Courts reports data on criminal court cases in two categories: misdemeanors and felonies. After screening a case and deciding it warrants further action, the state’s attorney must file formal charges in court. Misdemeanor cases are less serious than felonies and can be punished by a probation sentence of one year or less and less than one year of incarceration. Felony cases, on the other hand, are more serious and can be punished by a probation term up to four years and incarceration for more than one year. When comparing the number of filings across time and across counties, it should be noted that differences in reporting practices exist. For example, when two or more defendants are involved in a single case, some state’s attorneys file a single case charging all defendants, while others file a separate case for each suspect.
In 2003, felony and misdemeanor court filings accounted for 7 percent of all filings in Rock Island County’s courts (civil, traffic, family, and other). Between 1994 and 2003, the number of felony filings in Rock Island County increased 5 percent, from 1,121 to 1,176 (Figure 8). During the same period, misdemeanor filings decreased 1 percent, from 2,324 in 1994 to 2,295 in 2003. In 2003, misdemeanor filings out-numbered felony filings by nearly two to one.

Figure 8

Felony and Misdemeanor Filings in Rock Island County

Source: Administrative Office of the Illinois Courts
Between 1994 and 2003, the felony-filing rate in Rock Island County increased 7 percent, from 744 to 795 cases per 100,000 population (Figure 9). The felony-filing rate in the other urban counties increased 29 percent during this period, from 705 to 912 cases per 100,000 population. In 2003, the felony-filing rate in Rock Island County was 13 percent lower than the rate in the other urban counties.

Illinois’ juvenile court system differs in several key aspects from the adult criminal court system. One aspect revolves around the difference in treatment between juveniles and adults: the juvenile court process is somewhat less formal and adversarial; authorities are given much more latitude in determining the proper response to each case. Traditionally, the terminology used to describe juvenile proceedings has been less harsh than that used for the adult criminal process. For example, Illinois’ juvenile courts accept “petitions of delinquency” rather than misdemeanor or felony criminal complaints. However, pursuant to the Juvenile Court Reform Act of 1998, criminal court terms, such as “trial” and “sentencing,” have replaced the less harsh “adjudicatory hearing” and “dispositional hearing” terms.
Between 1994 and 2003, the number of reported juvenile delinquency petitions filed in Rock Island County increased 38 percent, from 120 to 166 (Figure 10). During the period analyzed, the number of reported delinquency adjudications more than doubled, from 72 in 1994 to 149 in 2003. Between 1994 and 2003, the proportion of the juveniles named in delinquency petitions and who were subsequently adjudicated delinquent increased 50 percent. In 2003, 90 percent of the juveniles named in delinquency petitions were adjudicated delinquent, compared to 60 percent in 1994.

**Figure 10**

**Juvenile Delinquency Petitions Filed and Adjudicated in Rock Island County**

Between 1994 and 2003, the delinquency petition-filing rate in Rock Island County increased 48 percent, from 788 to 1,165 per 100,000 juveniles. During the same period, the delinquency petition-filing rate in the other urban counties decreased 9 percent, from 1,951 to 1,776 petitions per 100,000 juveniles. In 2003, the delinquency petition-filing rate in the other urban counties was 52 percent higher than the rate in Rock Island County.
Anyone convicted of a felony in Illinois can be sentenced either to prison or probation, or receive a conditional discharge. A number of factors influence the type and length of sentence imposed on convicted felons, including the severity of the crime, the offender’s criminal and social history, safety of the community, and legislation affecting certain types of offenses. For some types of convictions a sentence to prison is required by state statute.

Between 1994 and 2003, the number of offenders convicted of a felony and sentenced in Rock Island County increased 6 percent, from 754 to 799 (Figure 11). The number of convicted felons sentenced to probation decreased 10 percent, from 540 to 486, while the number of convicted felons sentenced to prison increased 15 percent, from 212 in 1994 to 243 in 2003. As a result, felony probation sentences decreased as a proportion of total sentences, decreasing from 72 percent of all convicted felons in 1994 to 61 percent in 2003. The proportion of convicted felons sentenced to prison, on the other hand, increased as a proportion of total sentences, from 28 percent in 1994 to 30 percent in 2003. In 2003, 9 percent of convicted felons were sentenced to something other than prison or probation.

Figure 11

Sentences Imposed on Felons Convicted in Rock Island County

Source: Administrative Office of the Illinois Courts
Adult Prison Admissions from Rock Island County

Between State Fiscal Years (SFYs) 1994 and 2004, the number of admissions to the Illinois Department of Corrections’ Adult Division from Rock Island County increased 13 percent, from 216 to 243 (Figure 12). During this period, the number of violent, property, and drug offender admissions increased. The number of property offender admissions increased 21 percent, from 92 in SFY 1994 to 111 in SFY 2004, while drug offender admissions increased 19 percent, from 58 to 69 and the number of violent offender admissions, increased 6 percent, from 47 to 50 between SFYs 1994 and 2004.

Figure 12

IDOC New Court Commitments from Rock Island County, by Offense Type

In SFY 2004, violent offenders accounted for 21 percent of all commitments from Rock Island County, a slight decrease from SFY 1994 when violent offenders comprised 22 percent of prison commitments. Property offenders accounted for 43 percent of prison commitments from Rock Island County in SFY 1994, compared to 46 percent in SFY 2004. Between SFYs 1994 and 2004, the proportion of prison commitments from Rock Island County that were drug offenders increased slightly, from 27 percent to 28 percent of all commitments.
Juvenile Court Commitments to the Illinois Department of Corrections

The Illinois Department of Corrections’ Juvenile Division provides long-term custody for youths, 13 to 17 years old, who have been found delinquent by the juvenile court and committed to the IDOC. Youths may remain in an IDOC juvenile facility until they are 21. Between SFYs 1994 and 2004, the number of court commitments to the IDOC’s Juvenile Division from Rock Island County more than doubled, from 19 to 48 (Figure 13).

**Figure 13**

**Juvenile Court Commitments to the IDOC Juvenile Division from Rock Island County**

![Graph showing the increase in juvenile court commitments to the IDOC Juvenile Division from Rock Island County between 1994 and 2004]

*Source: Illinois Department of Corrections*

In SFY 2004, Rock Island County’s rate of commitments to the IDOC’s Juvenile Division of 373 commitments per 100,000 juveniles was 28 percent higher than the rate of 291 commitments per 100,000 juveniles from the other urban counties.
Adult and Juvenile Probation Caseloads in Rock Island County

Between December 31, 1994 and December 31, 2003, the number of active adult probation cases in Rock Island County increased 29 percent, from 1,675 to 2,159 (Figure 14). In 2003, felony offenders accounted for 43 percent of Rock Island County’s active adult probation caseload. Between 1994 and 2003, the number of juveniles supervised by the Rock Island County Juvenile Probation Department increased 46 percent, from 150 to 219. By comparison, the number of active adult probation cases in the other urban counties increased 29 percent between 1994 and 2003, while the juvenile probation caseloads increased 36 percent.

The active adult probation caseload rate per 100,000 population in Rock Island County increased 31 percent between 1994 and 2003, from 1,112 to 1,460 cases per 100,000 population. During that same period, the active adult probation caseload rate increased 23 percent in the other urban counties, from 626 to 772 cases per 100,000 population. In 2003, the active adult probation caseload rate in Rock Island County was 89 percent higher than the rate in the other urban counties.
IV. Jail Populations in Rock Island County

Jail data in Illinois are collected by the Illinois Department of Corrections’ Bureau of Inspections and Audits. As with court data, data are not available detailing the specific offenses for which offenders were held in county jails. In addition, between SFYs 1992 and 1994, the IDOC did not collect Illinois jail population data. Data presented for SFY 1994 were estimated by the Authority using the reported SFYs 1991 and 1995 data.

**Average Daily Population of the Rock Island County Jail**

The Rock Island County Jail was one of 91 county jails in operation in Illinois during SFY 2003. There were 11 counties that did not operate a jail of their own; they relied on other counties to house their pretrial detainees and sentenced offenders at either a per-diem or contracted rate.

Between SFYs 1994 and 2003, the average daily population of the Rock Island County Jail increased 24 percent, from 190 to 235 inmates (Figure 15). During this period, pretrial detainees (those individuals who have been arrested for a crime and are awaiting trial) accounted for a slightly increased percentage of the average daily population, from 81 percent in SFY 1994 to 83 percent in SFY 2003. On the other hand, sentenced offenders (those offenders who have been convicted and sentenced to the county jail) accounted for a decreased percentage; 19 percent in SFY 1994 compared to 17 percent in SFY 2003.

V. Indicators of Child Abuse and Neglect in Rock Island County

Substance-Exposed Infants in Rock Island County

Illinois continues to experience the effects of prenatal substance abuse. In Illinois, if a baby is born and thought to have been exposed to illegal substances or alcohol, either through observation by physicians or toxicology tests, the case is reported to the Illinois Department of Children and Family Services (DCFS). These cases are then investigated by DCFS to verify the child’s prenatal exposure to either alcohol or illegal substances. Between SFYs 1994 and 2004, 96 of Illinois’ 102 counties reported at least one case of a substance-exposed infant.

Between SFYs 1994 and 2004, the number of reported cases of substance-exposed infants in Rock Island County decreased 44 percent, from 27 to 15. During the same period, the number of verified cases of substance-exposed infants decreased 54 percent, from 24 to 11 (Figure 17).

![Figure 17](image_url)

Between SFYs 1994 and 2004, the number of reported cases of substance-exposed infants in the other urban counties decreased 41 percent, from 337 to 200, while the number of verified cases of substance-exposed infants decreased 42 percent, from 318 to 185.
Child Abuse and Neglect Cases Reported and Verified in Rock Island County

Recent research on the relationship between maltreatment of youth and delinquency has revealed an important distinction between child maltreatment and adolescent maltreatment. Using data from the Office of Juvenile Justice and Delinquency Prevention’s Program of Research on the Causes and Correlates of Delinquency, researchers have found that youth that were abused during childhood (12 years of age or less) were no more likely to become delinquent than youth who were not abused, but youth who were abused during adolescence (after age 12) were significantly more likely to be delinquent.\(^1\) While prior child abuse may not be linked to juvenile delinquency, studies examining prior child abuse have shown that childhood victimization may be linked to other poor outcomes in youth, including low academic achievement, teenage parenthood (particularly for females), drug use, and symptoms of mental illness.\(^2\) Additionally, research examining adolescent victimization (including physical and sexual assaults) and adult outcomes has found a correlation between previous victimization and substance abuse, depression, and post-traumatic stress disorder in adulthood.\(^3\) In Illinois, DCFS investigates reported cases of child abuse.

---

Between SFYs 1994 and 2004, the number of child abuse and neglect cases reported in Rock Island County decreased 23 percent, from 2,600 to 1,997 (Figure 18). During that same period, 8,480 cases, or 35 percent of all cases reported, were verified by a DCFS investigation. Verified cases of child abuse and neglect in Rock Island County decreased 27 percent between SFYs 1994 and 2004, from 933 to 679.
