Introduction

Drug task forces were developed to more efficiently and effectively fight proliferation of illicit drugs. Local police have jurisdictional restraints making it difficult to combat drug markets extending through multiple cities, and counties (Smith, Novak, Frank, & Travis, 2000). Drug task forces work across jurisdictions and pool resources, knowledge, and personnel. MEGs and task forces are staffed by officers representing federal, state, county, and local police agencies. Drug task force officers work undercover, using confidential sources, to purchase drugs in order to gather the intelligence to make arrests (Reichert, 2012).

There are two kinds of drug task forces that operate in Illinois—metropolitan enforcement groups (MEG) and multi-jurisdictional drug task forces.

MEGs have been in existence in Illinois since the 1970’s through the Intergovernmental Drug Enforcement Act [30 ILCS 715/1]. MEG policy boards engage in an active, formal role in the management of operations. MEG policy boards are required to include an elected official and the chief law enforcement officer, or their designees, from each participating unit of government. An elected official from one of the participating agencies must be designated to act as financial officer of the MEG to receive operational funds. MEG operations are limited to the enforcement of drug laws and delineated weapons offenses and the investigation of street gang-related crimes.

Multi-jurisdictional drug task forces began in the 1980’s using the organizational authority from the Intergovernmental Cooperation Act [5 ILCS 220/1]. Task force policy boards are not governed by legislated structure or composition requirements or restricted by statute in their scope of operations.

Drug use in Illinois

According to Substance Abuse and Mental Health Services Administration (SAMHSA)’s National Survey on Drug Use and Health, 718,000 Illinois adults used illicit drugs in the past month and 547,000 used marijuana in the past month in 2009. The University of Illinois’ 2010 Youth Study on Substance Use interviewed 5,590 Illinois students and found marijuana was used by 25 percent of 12th graders, but less than 6 percent reported using illicit drugs. A majority (78 percent) of arrestees booked into Cook County Jail tested positive for drugs based on the 2010 Arrestee Drug Abuse Monitoring Program (ADAM).

According to SAMHSA, an estimated 757,000 Illinois adults had an illicit drug or alcohol abuse dependence problem in the past year and 927,000 needed, but did not receive, treatment. According to the Illinois Department of Human Services’ Department of Alcoholism and Substance Abuse, in 2009, there were 91,891 admissions in Illinois for substance abuse treatment—a rate of 712 per 100,000 people. There were 60,501 admissions for treatment for illicit drugs—a rate of 469 per 100,000 people. According to the data, admissions are at the lowest rate in ten years due in part to funding cuts for state-funded substance abuse treatment. According to SAMHSA’s Drug Abuse Warning Network, in 2009 there were 790 drug-related
deaths reported in nine northern Illinois counties, a rate of nine deaths per 100,000.\(^1\) According to the Centers for Disease Control and Prevention, in 2007, the rate of unintentional drug overdoses was nine per 100,000 persons or 1,094 overdoses.

**Combating Illinois drug crime**

The transportation and sale of drugs is a significant problem in Illinois. Illinois is classified as a “High Intensity Drug Trafficking Area” by the Office of the National Drug Control Policy (2010). The city of Chicago is a major transshipment and distribution center for drugs in the Midwest due in part to its central location in the U.S. In addition, there are extensive transportation options to and from the city—trains, highways, airports (National Drug Intelligence Center, 2001). From Chicago, smaller quantities are distributed to neighboring states (National Drug Intelligence Center, 2001).

Drug task forces combat drug markets and the supply of drugs through supply reduction techniques (Olson, 2004). Supply reduction involves crop eradication, interdiction, reducing drug production and cultivation, seizing large numbers of drugs and assets, conducting systematic investigations, interrupting supply lines, and prosecuting drug organizations, suppliers, and distributors (Moore, 1990). The other technique to fight drug crime is demand reduction which includes drug prevention, deterrence, and treatment. Some law enforcement departments use the demand reduction program, Drug Abuse Resistance Education (DARE) (Olson, 2004).

**Drug task force evaluation**

While there is an abundance of anecdotal evidence to prove the effectiveness of multi-jurisdictional drug task forces, little empirical knowledge on the success of the task forces exists and they cannot be classified at this time as an evidence-based practice. Researchers debate the most appropriate way to evaluate the effectiveness of drug task forces (Smith et al., 2000). Since it is not possible to differentiate between the impact of drug task forces and other measures, they are difficult to evaluate (Olson, Albertson, Brees, Cobb, Feliciano, Juergens, Ramker, and Bauer, 2002).

A common measure of success of drug task forces is the number of arrests made. However, drug task forces tend to have lower arrest rates than local police departments and target different offenses. Drug task forces attempt to remove fewer higher-level distributors rather than a large number of low-level offenders and users (Olson, 2004). Drug task forces tend to focus on violations of Illinois’ Controlled Substances Act (involving cocaine, heroin, and methamphetamine) and local police department arrests focus on cannabis-related offenses (Olson et. al., 2002).

Official drug arrest data is an unreliable source to measure success of drug task forces. Drug task force arrests involve multiple police departments and local jurisdictions. Therefore, arrests reported to the FBI’s Uniform Crime Reports (UCR) data system may not accurately reflect

---

\(^1\) Illinois Counties participating in DAWN include Grundy, DuPage, DeKalb, Cook, Will, McHenry, Lake, Kendall, and Kane.
which agency—drug task force or local police—made the arrest (Olson, 2004). Drug crimes may be over-reported when more than one department reports the same arrest or may be under-reported or never reported (Olson, 2004).

**Drug task force profiles**

Periodically, the ICJIA profiles Illinois MEGs and task forces to provide a general overview of the drug crime problems in the various jurisdictions and share responses to these problems. These profiles can provide information to MEG and task force directors and policy board members to guide decision-making and the allocation of resources. All current and previous profiles can be accessed on the ICJIA’s website: http://www.icjia.state.il.us.

This profile focuses on the DuPage County Metropolitan Enforcement Group (DUMEG), which covers DuPage County with an estimated total population of 932,541 in 2010. In 2011, 23 local police agencies participated in DUMEG. These agencies served more than two-thirds, or 69 percent, of the population in DuPage County. A participating agency is defined as one that contributes either personnel or financial resources to the task force. Twelve officers and one State’s Attorney Inspector were assigned to DUMEG in 2011, nine of the officers were assigned by participating agencies and three from the Illinois State Police (ISP). These officers are dedicated full-time to the task force and work out of a central task force office.

**ICJIA-funded drug task forces**

ICJIA is designated as the State Administering Agency of many federal funds including Edward Byrne Justice Assistance Grants which fund MEGs and task forces. For more than 20 years the Illinois Criminal Justice Information Authority (ICJIA) has been awarding federal funding to local law enforcement agencies to support drug task forces. Federal grants awarded to drug task forces pay for personnel, equipment, commodities, travel, vehicle maintenance, and communications. In 2011, the ICJIA funded 19 of 22 multi-jurisdictional drug task forces in Illinois (Map 1). The three other drug task forces receive the majority of their funding through the Illinois State Police.

*Table 1* indicates the amount of federal funds allocated by the ICJIA to DUMEG from federal fiscal year (FFY) 2007 to 2011. During the past five FFYs, the award amount has remained relatively stable at approximately $145,625.

Drug arrest trends

Drug offenses in Illinois

The majority of drug offenses in Illinois are violations of either the Cannabis Control Act [720 ILCS 550], which prohibits the possession, sale and cultivation of marijuana, or the Controlled Substances Act [720 ILCS 570], which prohibits the possession, sale, distribution or manufacture of all other drugs deemed to have a high potential for abuse, including cocaine, hallucinogens, and opiates. Other Illinois laws to fight drug-related activity include the Hypodermic Syringes and Needles Act [720 ILCS 635], which prohibits the possession or sale of hypodermic instruments, and the Drug Paraphernalia Control Act [720 ILCS 600/3], which prohibits the possession, sale, or delivery of drug paraphernalia.

Violations of the Illinois Controlled Substances Act are considered to be the most serious, since they are mostly classified under Illinois law as felonies due to the dangerous nature of the drugs involved. Felony offenses carry prison sentences of one year or more. The majority of cannabis and drug paraphernalia offenses encountered by police, on the other hand, tend to be classified under Illinois law as misdemeanors, which typically carry jail terms of less than a year.

Drug data sources

Two sources of drug arrest data are presented in this section: 1) quarterly data reports for the period 2002-2011 submitted by DuPage Metropolitan Enforcement Group (DUMEG) to the ICJIA as a grant requirement; and 2) drug arrest statistics for 2002-2011 derived from criminal history record information (CHRI) submitted by law enforcement agencies in DuPage County to the Illinois State at the time of arrest, including those made by both DUMEG and non-DUMEG officers.

Through a cooperative agreement with the Illinois State Police (ISP), the ICJIA has established an in-house computer linkage to certain elements of the state’s Criminal History Record Information (CHRI) System, which is the central repository for offenders’ arrest and conviction history. The ICJIA is able to derive statistical information on arrests for specific charges and agencies from these data which are directly comparable to arrests reported by DUMEG. The CHRI data were used to obtain the number of drug arrest for all law enforcement agencies in DuPage County from 2002-2011, from which DUMEG arrests could be subtracted to create non-MEG comparative drug arrest statistics.

Subclasses of drug arrests, for example felonies versus misdemeanors, cannabis versus controlled substance, delivery versus possession, and detailed offense classes, may not add up to the broader drug arrest totals due to reporting omissions and inconsistencies.
Drug arrests

From 2000 to 2009, the drug arrest rate for Illinois decreased 20 percent from 932 arrests per 100,000 population to 743 arrests per 100,000. During the same time period, the drug arrest rate for DuPage County decreased less than one percent, from 466 arrests per 100,000 population to 462 arrests per 100,000 population (Figure 1).
From 2002 to 2011, the number of drug arrests for cannabis and controlled substances reported in the CHRI data in DuPage County increased. This includes arrests made by all law enforcement officers—both DUMEG and non-DUMEG. Violations of cannabis accounted for more drug arrests in the county than violations of controlled substance. Figure 2 depicts the drug arrests by type in DuPage County from 2002 to 2011. The number of cannabis drug arrests in DuPage County increased from 1,149 in 2002 to 1,216 in 2011, and the number of controlled substance arrests increased from 812 in 2002 to 849 in 2011.

Figure 2
Drug arrests by type, DuPage County, 2002-2011

Source: CHRI data as interpreted by ICJIA
Using CHRI data, it was possible to isolate non-DUMEG drug arrests by subtracting drug arrests reported by DUMEG from the total arrests in CHRI for DuPage County, as both appear in CHRI through the fingerprinting process at booking. *Figure 3* shows the number of drug arrests made each year by DUMEG officers and non-DUMEG agencies from 2002 to 2011. In DuPage County, the number of drug arrests made by non-DUMEG agencies slightly decreased from 1,828 in 2002 to 1,820 arrests in 2011. The number of drug arrests made by DUMEG shows an increase from 133 arrests in 2002 to 245 arrests in 2011.

![Figure 3](image_url)

*Figure 3*
Drug arrests made in DuPage County, DUMEG vs. non-DUMEG agencies, 2002-2011

In 2011, there were 940 felony drug arrests made in DuPage County. DUMEG reported that they made 206 felony drug arrests in 2011. Assuming that the majority, if not all, of DUMEG arrests were made within DuPage County, then 22 percent, were made by DUMEG. DUMEG also made approximately 3 percent or 32 of the 992, misdemeanor arrests in DuPage County. In total, then, the 12 officers assigned to DUMEG—nine from local agencies and three ISP officers—made 245 (seven drug arrests were not classified at felony or misdemeanor) drug arrests or approximately 20 drug arrests per officer. In DuPage County, the 1,788 full time sworn officers made approximately 2,065 (133 arrests were not classified as felony or misdemeanor) drug arrests or 1.15 arrests per officer.

---

2 Please note that the main focus of DUMEG officers is drug arrests. Non-task force law enforcement officers within DuPage County handle all criminal cases and arrests within the county and are not focused solely on drug cases.
From 2002 to 2011, the number of cannabis and controlled substances arrests made by DUMEG and reported to the ICJIA more than doubled, from 133 to 245. Violations of the *Controlled Substances Act* accounted for more drug arrests made by DUMEG throughout the period analyzed than violations of the *Cannabis Control Act*. From 2002 to 2011, arrests for violations of the *Controlled Substances Act* more than doubled, from 90 to 191, while the number of DUMEG arrests for violations of the *Cannabis Control Act* increased 25 percent, from 43 to 54 (Figure 4).

![Figure 4](drug-arrests-by-dumeg-2002-2011.png)

*Figure 4*

**Drug arrests by DUMEG, 2002-2011**

Source: DUMEG data reports to the ICJIA
Figure 5 presents the number of cannabis and controlled substances arrests made by non-DUMEG agencies in DuPage County during the period 2002 to 2011. From 2002 to 2011, the number of cannabis and controlled substances arrests made by non-DUMEG agencies decreased slightly from 1,828 to 1,820. Violations of the Cannabis Control Act consistently accounted for more drug arrests made by non-DUMEG agencies throughout the period analyzed than violations of the Controlled Substance Act. From 2002 to 2011, arrests for violations of the Cannabis Control Act increased from 1,106 to 1,162, while the number of non-DUMEG agency arrests for violations of the Controlled Substances Act decreased from 722 to 658.

Source: CHRI data as interpreted by ICJIA
In 2011, 77 percent of the drug arrests made by DUMEG were for violations of the *Controlled Substances Act*, compared to 68 percent in 2002. In 2011, 87 percent of drug arrests made by DUMEG were felonies, while 13 percent were misdemeanor arrests (*Figure 6* and *Figure 7*).

*Figure 6*

*Percent of DUMEG arrests in DuPage County by offense type, 2011*

*Figure 7*

*Percent of DUMEG arrests in DuPage County by violation type, 2011*

- Controlled substance: 77%
- Cannabis: 23%

Source: DUMEG data reports to the ICJIA
In contrast to DUMEG drug arrests, approximately 43 percent of drug arrests made by non-DUMEG agencies in DuPage County in 2011 were felonies and approximately 57 percent were misdemeanor arrests. In 2011, 62 percent of the drug arrests made by non-DUMEG agencies were for violations of the Cannabis Control Act (Figure 8 and 9).

Figure 8
Percent of non-DUMEG arrests in DuPage County by offense type, 2011

Figure 9
Percent of non-DUMEG arrests in DuPage County by violation type, 2011

- Cannabis: 62%
- Controlled substance: 38%

Source: CHRI data as interpreted by ICJIA
In 2011, DUMEG made 32 misdemeanor arrests. Of those arrests, 66 percent were for violations of the *Cannabis Control Act*. During the same time period, non-DUMEG agencies made 960 misdemeanor arrests, with 97 percent being for violations of the *Cannabis Control Act* (Figure 10).

![Figure 10](image)

**Figure 10**
Percent of DUMEG versus non-DUMEG misdemeanor arrests by drug type, 2011

Cannabis arrests by class of offense

As seen in *Figure 2*, cannabis arrests in DuPage County (for both DUMEG and non-DUMEG agencies) accounted for a large proportion of all drug arrests made each year from 2002 to 2011. As previously stated, more of the offenses under the *Cannabis Control Act* are classified as misdemeanor offenses. Therefore, it would be expected that a majority of cannabis arrests would be misdemeanors.
More than half of the cannabis arrests made by DUMEG were felony arrests. In 2011, 61 percent of the cannabis arrests made by DUMEG were felony arrests compared to 12 percent for non-DUMEG agencies. In contrast, non-DUMEG cannabis arrests were primarily for misdemeanor arrests (Figure 11 and 12).

![Figure 11](image)

**Figure 11**

**DUMEG cannabis arrests by class, 2011**

**Figure 12**

**Non-DUMEG cannabis arrests by class, 2011**

- **Felony**: 12%
- **Misdemeanor**: 78%

Source: CHRI data as interpreted by ICJIA
Figure 13 shows the number of cannabis arrests by class for both DUMEG and non-DUMEG agencies in 2011. Most felony arrests by DUMEG were for Class X felonies. The majority of felony arrests by non-DUMEG agencies were for Class 4 felonies, however, as indicated earlier, felony arrests overall were much less prevalent compared to DUMEG agencies. Approximately 27 percent of DUMEG cannabis arrests were for a Class X felony compared to less than one percent for non-DUMEG agencies.

Source: DUMEG data reports to the ICJIA; CHRI data as interpreted by ICJIA
Between 2002 and 2011, the number of drug delivery arrests made by DUMEInternational University of Management and Economics (DUME) increased from 104 to 145 (Figure 14). Arrests for drug delivery accounted for nearly 70 percent of all drug arrests made by DUME between 2002 and 2011.

**Figure 14**

Number of DUME arrest for possession and delivery, 2002 versus 2011

Source: DUME data reports to the ICJIA
During the period analyzed, delivery of cannabis accounted for 66 percent of all arrests for violations of the Cannabis Control Act (Figure 15). In 2011, 19 arrests were made by DUMEG for possession of cannabis compared to 10 arrests in 2002. Thirty-five arrests were made for delivery of cannabis in 2011 compared to 33 arrests for delivery of cannabis in 2002.

![Figure 15: DUMEG cannabis arrests for possession and delivery, 2002-2011](image)

Source: DUMEG data reports to the ICJIA

**Cannabis drug seizures**

Drugs seized by law enforcement agencies are another indicator of the extent and nature of illegal drug trade in a jurisdiction. This section will look at the quantities of drugs seized by DUMEG and reported to the ICJIA. DUMEG data include total quantities of all drugs seized.

When illegal drugs are seized by law enforcement agencies, all or a portion of the total amount seized is submitted to a crime lab for analysis. Most agencies submit drugs to one of the Illinois State Police (ISP) crime labs. Depending on the location of the arrest and the type of arrest (i.e. local vs. federal), law enforcement agencies also submit drugs to the DuPage County Sheriff’s Office Crime Laboratory, the DEA crime laboratory, private laboratories, or local police departments. Currently the only statewide data available on drug seizures is from the ISP crime lab, which represents the quantities of seized drugs that were submitted to ISP for analysis. It is due to these limitations that only the drug seizures made by DUMEG will be discussed in this section and therefore comparisons can not be made.
The primary factors influencing the amount of drugs seized are the number of officers assigned to the unit and type of investigations which are undertaken. Although experienced narcotics agents enhance the successful outcome of the unit’s investigations, without sufficient manpower the ability to initiate and sustain successful investigations is greatly diminished. The state of the economy has placed many federal, state, county and local law enforcement agencies at reduced staffing levels. This in turn has required some agencies to reassign their officer(s) from the unit back to the parent agency thereby depleting available manpower in the unit. A traditional undercover investigation may develop into a conspiracy investigation which is time and labor intensive. A lack of manpower coupled with a time and labor intensive investigation translates into less time available for developing new investigations, conducting proactive enforcement details and undercover drug purchases.

Changes in drug trends also play a role in the type and quantity of seizures. An increase in new forms of designer drugs such as synthetic cannabis and bath salts, as well as quicker production methods of methamphetamine, requires a learning period for the agents. Agents then direct their efforts towards this new emerging community threat at the expense of time spent on traditional drug investigations. Spiked increases in these emerging drugs will skew seizures from previous years. Agents must constantly balance immediate community drug threats with investigations which attack the source of supply to the community. The availability of traditional drugs such as cocaine, crack, cannabis and heroin fluctuate with the supply chain. If an investigation in a community has sent members of a drug distribution network to prison, then a noticeable disruption in that particular drug is observed, even if for a brief period. Finally, seizure numbers may be lopsided if an investigation leads to a source of supply with an unusually large amount of contraband being seized during transportation or storage. (R. Bodemer, personal communication, January 25, 2011)

County-level cannabis, cocaine, crack, methamphetamine, and heroin seizure rates for Illinois’ 102 counties based on ISP crime lab data are provided in the appendices of this report.
Cannabis seizures

The quantity of cannabis seized by DUMEG fluctuated greatly between 2002 and 2011. In 2002, DUMEG seized over 5.6 million grams of cannabis and in 2007 DUMEG seized nearly 4.1 million grams of cannabis (Table 2). Cannabis accounted for an average of 91 percent of the total drug seizures made by DUMEG from 2002 to 2011.

Controlled substance arrests

In DuPage County, based on CHRI data, arrests for violations of Illinois’ Controlled Substances Act increased 5 percent between 2002 and 2011, from 812 to 849 arrests.

DUMEG arrests for violations of the Controlled Substances Act more than doubled from 90 to 191 arrests during that time. In 2011, the 191 arrests for controlled substance violations accounted for 78 percent of all drug arrests reported to the ICJIA by the unit.
Approximately 94 percent of controlled substance arrests made by DUMEG were felony arrests, compared to 93 percent for non-DUMEG controlled substance arrests in 2011 (Figure 16 and 17).

**Figure 16**

**Figure 17**
Non-DUMEG controlled substance arrests by class, 2011
- Felony: 93%
- Misdemeanor: 7%

Source: CHRI data as interpreted by ICJIA
Figure 18 shows the number of controlled substance arrests by class for both DUMEG and non-DUMEG agencies in 2011. Approximately 19 percent of DUMEG controlled substance arrests were for Class X felonies. Also, approximately one-third of the controlled substance arrests made by DUMEG were for Class 1 felonies and one-third were for Class 4 felonies. The highest portion, 62 percent, of controlled substance arrests by non-DUMEG agencies were for Class 4 felonies.

Source: CHRI data as interpreted by ICJIA; DUMEG data reports to ICJIA
DUMEG drug arrests by type

As indicated previously, the majority of all drug arrests reported by DUMEG were for delivery and possession with intent to deliver controlled substances. Between 2002 and 2011, the number of controlled substance drug delivery arrests made by DUMEG increased from 71 to 110. During the same period, arrests for drug delivery accounted for nearly 70 percent of all drug arrests made by DUMEG between 2002 and 2011. Arrests for delivery of controlled substances accounted for 70 percent of the total number of arrests made for violations of the Controlled Substance Act (Figure 19).

Cocaine seizures

Between 2002 and 2011, DUMEG seized 1,700,850 grams of cocaine (Table 3). DUMEG seized over 390,000 grams of cocaine in both 2003 and 2004. This is in comparison to a low seizure of 5,257 grams in 2008.

During the period analyzed, powder cocaine, rather than crack cocaine, accounted for nearly all cocaine seized by DUMEG and the region covered by DUMEG (99.9 percent).

Methamphetamine and heroin seizures

In May 2005, the Illinois State Police created six regionally located methamphetamine response teams (MRT). These units were created specifically to target meth-related crimes with MRT personnel taking the lead on meth cases, including investigation and meth lab deconstruction and decontamination.

DUMEG seized 1,730 grams of methamphetamine between 2002 and 2011, including 502 grams in 2010. DUMEG also seized 5,446 grams of heroin between 2002 and 2011. DUMEG has had an increase in heroin seizure over the past four years, seizing 108 grams in 2008, 114 grams in 2009, 776 grams in 2010, and 1,767 grams in 2011. The amounts all of other controlled substance seizures are small relative to cocaine seizures.
Trends in prosecutions for drug offenses and all felonies

Drug prosecutions

Between 2002 and 2011, 1,982 drug prosecutions were initiated as a result of DUMEG arrests in DuPage County. A prosecution occurs after a prosecutor files charges against a defendant in court following an arrest. However, not all arrests result in a prosecution. A prosecutor may not file charges due to insufficient evidence or because the defendant was offered a deferred prosecution diversion. In addition, prosecution decisions may vary according to prosecutor practices in each county, which affects the number of prosecutions and ultimately the number of convictions.

The Illinois Criminal Justice Information Authority (ICJIA) funds prosecution units in some, but not all, MEG/TF counties. These drug prosecution units work directly with drug task forces to handle their complex cases and high caseloads. These units develop drug cases, prosecute offenders, and conduct forfeitures. In FY10, there were eight drug prosecution units funded by the ICJIA working with drug task forces in Illinois. Seven counties had a designated drug prosecution unit—Cook, DuPage, Kane, Lake, McHenry, St. Clair, and Will. In addition, the State’s Attorney’s Appellate Prosecutor provided attorneys to assist in prosecuting drug cases in 11 counties: Champaign, Jefferson, Kankakee, Macon, Madison, McLean, Peoria, Rock Island, Sangamon, Tazewell, and Winnebago.
Between 2002 and 2011, DUMEG drug arrests nearly doubled, from 133 in 2002 to 245 in 2011 (*Figure 20*). During that time period, 99 percent of all drug arrests by DUMEG resulted in prosecution. Sixty-two percent of DUMEG drug offender prosecutions during that time period were for violations of the *Controlled Substance Act*.

In some years, data shows the percentage of prosecutions exceeded 100 percent of arrests. This is due to differences in the timing of an arrest and the filing of charges being reported by the unit.

Data from the DuPage County prosecution unit shows that in 2011 they prosecuted 69 production/delivery/manufacture/importation DUMEG drug cases, 41 possession with intent to deliver DUMEG drug cases, and five possession DUMEG cases. Of the 119 DUMEG cases that were prosecuted, the majority (24 percent) were for production/delivery/manufacture/importation of cocaine.

*Figure 20*

**Total DUMEG drug arrests and percentage of arrests resulting in prosecution, 2002-2011**

Source: DUMEG data reports to the ICJIA
Drug convictions

Between 2002 and 2011, 63 percent of the 1,982 drug offenders prosecuted as a result of DUMEG activity were convicted (n=1,242). Convictions for controlled substances accounted for 70 percent of all DUMEG initiated prosecutions during the period analyzed. Due to the time lapse between an arrest and subsequent prosecution, the number of prosecutions and convictions during a year does not directly reflect the number of arrests during the same year. Convictions may also be impacted by various drug diversion programs for which certain defendants may be eligible. Illinois also has “710” and “1410” probation, which are two types of first offender probation specifically for drug offenders. Unlike other probation offenses, the convictions may be eligible to be expunged. Data from DUMEG is currently the only readily available information on drug convictions.

Using CHRI data, it was possible to isolate non-DUMEG convictions by subtracting drug convictions reported by DUMEG from the total drug convictions in CHRI for DuPage County, as both appear in CHRI. In 2011, there were 593 drug convictions in DuPage County. The drug prosecution units funded by the ICJIA reported that they had 97 task force drug convictions in 2011. Assuming that the majority, if not all, of DUMEG arrests were made within DuPage County and prosecuted by the ICJIA funded drug prosecution units, then 16 percent of the DuPage County drug convictions were from DUMEG. DUMEG convictions accounted for approximately 7 percent, or 22 of the 319, Cannabis Control Act convictions and 27 percent, or 75 of the 274, Controlled Substance Act convictions in DuPage County. Fifty-four percent were convicted of production, distribution, manufacture or importation, 31 percent were convicted of possession with intent to deliver, and 15 percent were convicted of possession. According to the drug prosecution unit funded by the ICJIA, in 2011, 312 DUMEG offenders were convicted.
Drug offender sentencing trends

Under Illinois law, those convicted of most Class 1, 2, 3, and 4 felonies can be sentenced to a period of probation, periodic imprisonment, conditional discharge, imprisonment, a fine, restitution to the victim, and/or participation in an impact incarceration program. A fine or restitution cannot be the only disposition for a felony, and must be imposed only in conjunction with another disposition. When sentencing options exist for a judge a number of factors may influence the type and length of sentence imposed. These include the severity of the crime, the offender’s criminal and social history, and the safety of the community.

Drug sentences

According to the data reports provided by DUMEG, between 2002 and 2011, the number of DUMEG drug offenders convicted and sentenced for their offenses increased, from 76 to 194. In general, DUMEG sentences of all types have increased since 2002.

According to the drug prosecution units funded by the ICJIA, in 2011 the majority of drug offenders, both DUMEG and non-DUMEG offenders, were sentenced to a combination of jail and probation. Of the 312 offenders sentenced by the drug prosecution unit in 2011, 48 percent were sentenced to a combination of jail and probation, 34 percent were sentenced to prison, and 17 percent were sentenced to probation. Nearly one-half, 47 percent, of offenders convicted of the Cannabis Control Act were sentenced to combination of jail and probation. Of those offenders convicted of the Controlled Substance Act, 48 percent were sentenced to a combination of jail and probation, 42 percent were sentenced to prison, and 10 percent were sentenced to probation.
According to DUMEG data reports to the Authority, between 2002 and 2011 the number of convicted DUMEG drug offenders sentenced to prison increased from 27 to 43. The number also increased for probation, from 14 to 36. In addition, the number of convicted DUMEG drug offenders sentenced to county jail (which could include jail in combination with probation) increased from 23 to 77 (Figure 21). In 2011, 38 drug offenders had a sentence of “other”.

In 2011, jail sentences were most common among convicted DUMEG drug offenders (40 percent), followed by prison sentences (22 percent), and probation sentences (19 percent). The remaining 19 percent consisted of sentences to conditional discharge or court supervision.

Figure 21
Sentences imposed on convicted DUMEG offenders, 2002-2011

Source: DUMEG data reports to the ICJIA
Sentences to corrections

According to the Illinois Department of Corrections (IDOC), between state fiscal years\(^3\) 2000 and 2009, the number of new court commitments to corrections for drug arrests made by DuPage County local law enforcement agencies and DUMEG combined doubled, from 162 to 328. The number of drug offender commitments resulting from DUMEG arrests more than tripled, from eight to 37 between 2001 and 2010. IDOC commitments from DUMEG cases accounted for 11 percent of all drug-law violators sentenced to prison from the region, up from five percent in 2001\(^4\).

Statewide, the percentage of total new court commitments to IDOC accounted for by drug offenders remained relatively stable. However, drug offenders accounted for a slightly increasing percentage of adults convicted and sentenced to IDOC from DuPage County. In 2000, drug offenses accounted for 24 percent of all DuPage County-related commitments to IDOC, compared to 35 percent in 2009 (Figure 22).

---

\(^3\) Some state data are collected by state fiscal year. State fiscal years begin July 1 and end the following June 30. For example, state fiscal year 2000 covers July 1, 1999 to June 30, 2000.

\(^4\) While total prison sentences are obtained from IDOC data, those resulting from DUMEG arrests are obtained from DUMEG data reports.
Drug sentences to corrections by offense class

The offense class for drug sentences to corrections in DuPage County (which includes offenders arrested by DUMEG) also was examined. Class 4 felonies accounted for the largest proportion (53 percent) of sentences to IDOC for drug offenses during the period studied, followed by Class 1 felonies (21 percent), Class X felonies (18 percent), Class 2 felonies (4 percent) and Class 3 felonies (4 percent). Jail data is not currently available by offense type.

Between 2000 and 2009, the number of Class 4 felony sentences in DuPage County nearly doubled, from 67 to 124, while Class 1 felony sentences tripled from 20 to 64, Class 2 felony sentences increased from seven to 11, and Class 3 felony sentences rose slightly from 10 to 11. The number of Class X felonies increased 64 percent, from 25 to 41, during the same period.

Drug sentences to corrections by sentence length

An offender can be sentenced for a Class 4 felony to a period of incarceration from one to three years in the Illinois Department of Corrections (IDOC). The incarceration length for a Class 3 felony is two to five years and a Class 2 felony is three to seven years in IDOC. The length of incarceration in IDOC for a Class 1 felony is four to 15 years. A person who pleads guilty to or is found guilty of a Class X felony can be sentenced to a minimum of 6, 9, 12, or 15 years depending on the amount of the drug, and a maximum of 30 years extendable in certain cases to 60 years.

According to IDOC, the mean sentence length for Class 4 felony drug offenders has slightly increased, from 1.8 to 1.9 years. The mean sentence length for Class X felony drug offenders decreased from 8.9 to 8.8 years. Mean sentence length for Class 3 felony drug offenders in Illinois increased, from 2.9 to 3.0 years. Class 2 felony drug offender mean sentence lengths increased from 4.0 to 4.2 years and Class 1 drug offender mean sentence length increased from 5.1 to 5.5 years.
Survey of MEGs and task forces

Although the distribution of illegal drugs is difficult to measure precisely, data obtained from criminal justice sources can be helpful in estimating drug availability and prices. The ICJIA periodically conducts a survey of each MEG and task force in Illinois to gauge perceived availability and cost of drugs in their jurisdictions. The most recent survey was conducted in July 2009.

When applicable, responses from the 2000 survey and the most recent 2009 survey were compared. Results were analyzed by region. MEG and task force regions are classified as being either mostly urban, mostly rural, or mixed urban/rural, and were compared to similar units for purposes of this report.

Availability of drugs

According to survey responses, cannabis, powder cocaine, and crack cocaine continued to be the most visible drugs on the street. These drugs were reported as readily available across nearly all regions analyzed.
The perceived availability of most drugs in 2009 was relatively unchanged from 2000 in the region covered by DUMEG. The reported availability of PCP, methamphetamine, and LSD decreased slightly in the region. In all MEGs and task forces in mostly urban regions similar to DUMEG, the perceived availability of heroin increased slightly while PCP, methamphetamine, and LSD decreased slightly.

Methamphetamine was reported as moderately available across Illinois. DUMEG reported that meth was less available in DuPage County, similar to the perceptions of other MEGs and task forces in mostly urban regions. Heroin appeared to be more readily available in DuPage County than other mostly urban areas (Figure 23).

Figure 23
Availability of drugs in Illinois, 2009
1=Not available 5=Easily available

Source: Survey of Illinois MEGs and task forces
**The price of drugs**

Another market indicator is drug price—a change in supply, demand and availability are a few of the forces that determine drug price. In the statewide survey of MEG and task force units, changes in the average price of all the drugs examined between 2000 and 2009 varied across regions. The reported 2009 average prices of cocaine, crack, cannabis, and methamphetamine were relatively similar statewide and in mostly urban regions.

There were changes in the average prices of cannabis and heroin in the region covered by DUMEG. In 2009, MEGs and task forces reported the average price of cannabis was $12 per gram statewide, $16 per gram in mostly urban regions, and $20 per gram in the DUMEG region compared to $1 per gram in the DUMEG region in 2000. Conversely, the average price of heroin decreased during the last decade from $162 per gram statewide, $102 in mostly urban regions, and $25 per gram in the region covered by DUMEG compared to $200 per gram in 2000 in the DUMEG region. The average price of PCP and methamphetamine were not reported for DUMEG (*Figure 24*).

Conclusion

In 2011, DUMEG consisted of 12 full-time officers from agencies which comprise more than two-thirds of the population (69 percent) in DuPage County.

From 2002 to 2011, the number of cannabis and controlled substances arrests made by DUMEG and reported to the ICJIA nearly doubled, from 133 to 245 with violations of the Controlled Substances Act accounting for more drug arrests made by DUMEG throughout the period analyzed than violations of the Cannabis Control Act. In comparison, from 2002 to 2011, the number of cannabis and controlled substances arrests made by non-DUMEG agencies decreased from 1,828 to 1,820. Violations of the Cannabis Control Act consistently accounted for more drug arrests made by non-DUMEG agencies throughout the period analyzed than violations of the Controlled Substance Act.

Between 2002 and 2011, the number of DUMEG arrests for violations of the Cannabis Control Act increased 25 percent, from 42 to 54, while arrests for violations of the Controlled Substances Act more than doubled, from 90 to 191. In 2011, 78 percent of all drug arrests made by DUMEG were for violations of the Controlled Substances Act.

The quantity of cannabis seized by DUMEG fluctuated greatly between 2002 and 2011. DUMEG also seized 1,700,850 grams of cocaine between 2002 and 2011.

Between 2002 and 2011, 1,982 drug prosecutions were initiated as a result of DUMEG arrests in DuPage County. During the period examined, the number of DUMEG drug arrests nearly doubled, and 99 percent of all drug arrests by DUMEG resulted in prosecution. Sixty-two percent of DUMEG drug offender prosecutions during this period were for violations of the Controlled Substance Act.

Using CHRI data, it was determined that in 2011 there were 1,242 drug convictions in DuPage County. The drug prosecution units funded by the ICJIA reported that they had 97 drug convictions in 2011. Assuming DUMEG arrests were made within DuPage County and prosecuted by the ICJIA funded drug prosecution units, then 16 percent of the DuPage County drug convictions were from DUMEG and accounted for approximately 7 percent of the Cannabis Control Act convictions and 27 percent of the Controlled Substance Act convictions in DuPage County.

According to the drug prosecution units funded by the ICJIA, the majority of drug offenders, both DUMEG and non-DUMEG offenders, were sentenced to a combination of jail and probation. Of the 312 offenders sentenced by the drug prosecution unit in 2011, 48 percent were sentenced to a combination of jail and probation, 34 percent were sentenced to prison, and 17 percent were sentenced to probation.

According to survey responses, cannabis, powder cocaine, and crack cocaine continued to be the most visible drugs on the street and were reported to be readily available across nearly every region.
While DUMEG reported that methamphetamine was less available in DuPage County, heroin appears to be more readily available in the county.

The reported 2009 average prices of cocaine, crack, cannabis, and methamphetamine were relatively consistent statewide and in mostly urban regions. Cannabis had a higher average price in the DUMEG region than other regions, but heroin had a lower average price.
